To: Haines Assembly and Planning and Zoning members:

I support the current design of the Lutak Dock. As a recent Planning and Zoning Commissioner, I have reviewed the design in detail and approve it. My past experience as Data Manager of the Trans-Alaska Pipeline (TAPS) taught me of the importance of induced current cathodic protection. The current design is for a passive cathodic protection system. Impressed current systems are much more effective, and if there is room for improvement on the current design, I would be a strong proponent of an induced current cathodic protection system. The passive system is probably adequate for a freight dock.

Thank You -

Richard Clement
